

(1) Rank correlation
 (partial ansatz-dependence)

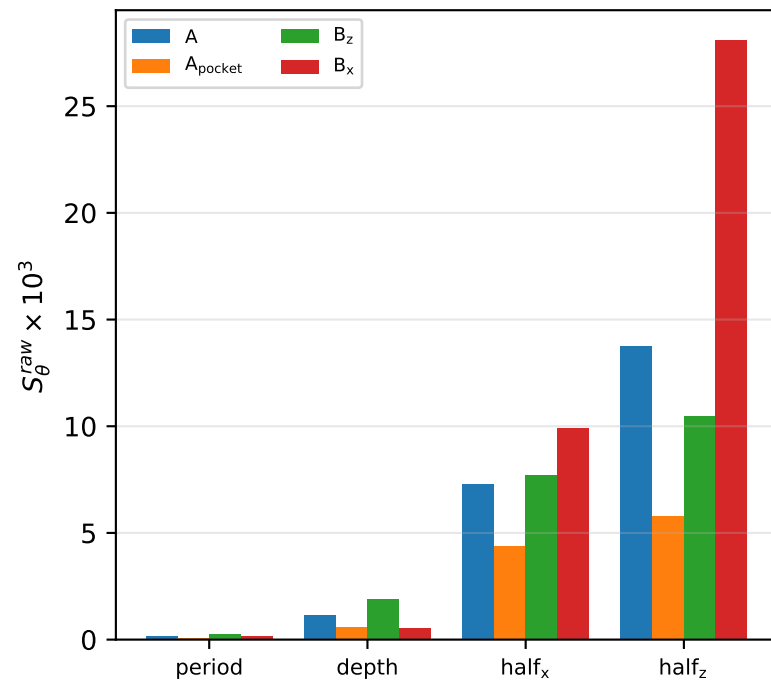

(2) Quadrant agreement
 (stronger ansatz-dependence)

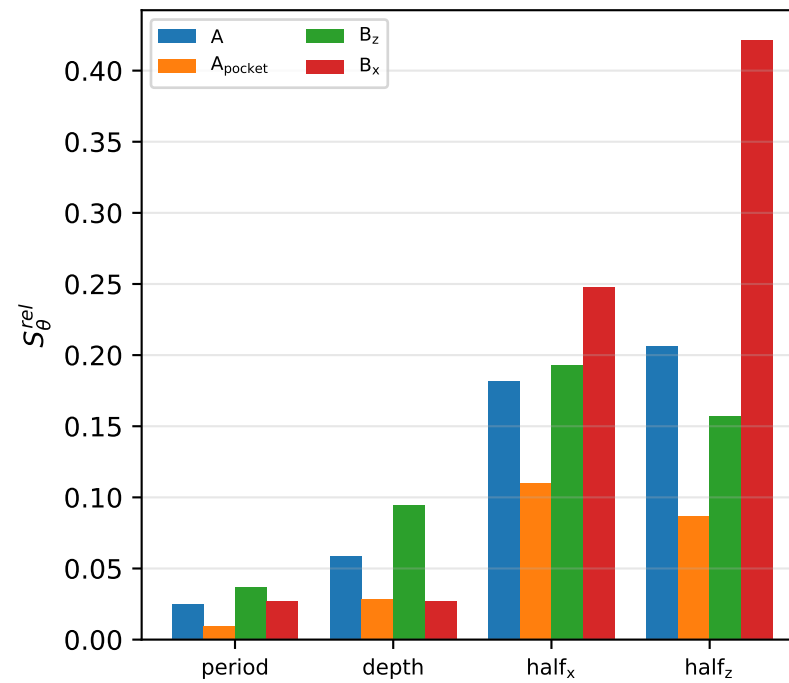

(3) Model distance
 (B_z vs B_x largest)

(4a) Raw geometry sensitivity
 (half_z dominant)

(4b) Relative geometry sensitivity
 (hierarchy weakened; period smallest)

(5) $A \rightarrow A_{\text{pocket}}$ quadrant shift
 (71 disagreement conditions)
